Major Function:

This position provides building and equipment mechanical maintenance, service and repair support as they apply to the physical facility and equipment within the facility.

To provide electrical and electronic maintenance, service and repair support as it relates to a wide range of equipment, machines and controls used for the production process.

To clean, thoroughly inspect, and problem solve maintenance activities in order to improve equipment performance, reduce equipment downtime, reduce maintenance costs and improve internal customer satisfaction.

Major Responsibilities:

Perform troubleshooting and diagnostic analysis of equipment malfunction related to mechanical, electrical, electronic or controller functionality of the equipment serviced.

Repair and maintenance on electronic controls and equipment involving a basic knowledge of electromechanical principles and the application to JSC equipment. Includes a requirement to adjust, calibrate, align and when necessary replace electronic controls. Extensive electronic repair is performed by outside vendors or specialized service technicians.

Includes the use of a variety of diagnostic and electrical or electronic testing devices to determine the nature of the malfunction, and through the use of specialized testing devices, trial-and-error and personal experience pin-point the malfunction.

Perform electrical, mechanical, hydraulic and electronic repair on equipment and control devices associated with machinery. Including a knowledge of PLC (programmable logic controller) programming.

Requires the diagnosis of malfunction, the replacement and/or repair of defective parts and the occasional requirement to fabricate a replacement part.

Requires the ability to work with or without complex schematics, diagrams or machine design prints. May include the requirement to develop and draw sketches and/or schematics.

Maintain and repair mechanical equipment within the facility. Maintenance Prevention – involvement in the design and establishing standards for new equipment.

Maintenance Prevention – involvement in the design and establishing standards for new equipment.

Predictive Maintenance – identify the life expectancy of production and facility equipment components by determining through historical data how long equipment will run before exceeding tolerances, needing lubrication, tuning, adjusting, overhauling or replacing..

Corrective Maintenance- through use of historical data and employee input continue to problem solve and improve equipment, facility and maintenance team performance by exposing and eliminating malfunctions and their causes. Results will be evident by measurable improved machine performance, reliability, and reduction in overall repair requirements over the life of the equipment.

If you desire the chance to make a difference and to work with great people who value teamwork, challenges and the ability to impact the future of the company, Please send your resume to Jagemann Stamping Company, 5757 West Custer Street, Manitowoc, WI 54220.
