#### **Major Function:**

To provide cleaning, evaluation, refurbishment, storage, distribution, and inventory control of individual tooling and tooling sets necessary to support the production effort.

**Major Responsibilities:**

Clean tooling and machine parts received from the production floor. Include the disassembly of tooling and the safe efficient operation of tool washing equipment. Washer area must be kept clean and orderly. Wash equipment must be maintained consistent with preventative maintenance requirements.

Evaluate tools and tool kits for damage, wear, and completeness. Includes the use of the computer system to identify tool specifications and identification numbers. Requires knowledge of part defect identification and the relationship between part quality and tool wear/damage. Includes visual inspection of tooling for defects, polish, sharpness and proper sizes. May include determining the need for substitute and/or replacement tools, and the issuance of tool order. This may include drawing from spare tooling, ordering tooling new or repair. Process requires knowledge of related transactions and order release functions. Requires the use of micrometers, calipers and bore indicators to determine accuracy of tooling dimension.

Restore tools and tool kits to required quality and completeness. Includes scheduling the repair and replacement of tooling. Includes replacement with tools from the spare tool inventory, issuing orders to replenish the spare tool inventory when required. Tooling orders are based on personal observation of the incumbent, inventory level of spares, the request of supervisor, or breakage and damage encountered during a production run.

Store tools and tool kits in their appropriate location. Include use of computer system inquiries to determine dedicated location for production tools and spare tools. Include receipt of tools from production or tool build. Includes the processes required for incoming inspection, documentation, and transactions required to update related files. Return tooling and last part samples to appropriate storage location. New tooling may require labeling the location, re-arrangement of storage drawers, up-date of item master file and pick list.

Responsible to maintain an accurate inventory of tools. Includes neat and organized tools storage systems, tool identification, location identification, and location balance. Include periodic cycle count and inventory validation.

**Qualifications:**

Good mechanical ability.

Math, problem solving and reading competency.

No Industrial experience required.

*If you desire the chance to make a difference and to work with great people who value teamwork, challenges and the ability to impact the future of the company please apply electronically at our website [www.jagemann.com](http://www.jagemann.com) or send your resume to [employmentapps@jagemann.com](mailto:employmentapps@jagemann.com)*
